

Design : Scouting report of a player

This design is a visual and graphic representation of a scouting report done for a team (ie Paris Saint Germain) of a player

- (1) This part gives general information about the player: height, age, nationality, strong and weak foot ...
We notice a color code: green if the scout finds it positive and red otherwise
- (2) Historical player information: Appearance and goals scored in each season of his career and for his team
- (3) Visual representation of positions played by the player. Color code (Red: Bad -> Yellow: Medium -> Dark green: Good -> Light green: Excellent)
By hovering the mouse over the colors, performance statistics will be displayed for the selected position
- (4) Comparison of the analyzed player with the players present at the club having the same profile. A ranking will be made by stars or by average ratings per games
- (5) Evolution of the rating over the last 5 games (possibility to change the period range or the competition)
- (6) Radar Graph of advanced player statistics. It will be possible to overlay with other players to make a comparison or with the championship average
- (7) Graphic representation of a player's activity (shots, passes or position) by choosing a specific match using a combobox
